The firefighters are wearing helmets and carrying air tanks. One firefighter in the foreground has "K. KNIGHT" written on their back. A large fire is burning in the background.

The seal of the Virginia Department of Fire Programs is centered over the image. It is a circular emblem with a gold border. Inside the border, the words "VIRGINIA DEPARTMENT OF" are at the top and "FIRE PROGRAMS" is at the bottom. The center of the seal features a circular illustration of a woman in a blue dress holding a torch, with the word "VIRGINIA" above her and the Latin phrase "SC SEMPER TYRANNIS" below her.

Executive Summary

Fire Service in Virginia has the responsibility to be prepared to respond to many different types of situations and events. Firefighters respond to all types of fires, but also have to be equipped to handle medical emergencies, rescue operations, hazardous conditions, and severe weather occurrences. Fire Service also performs many tasks of providing public service assistance to their local communities.

VFIRS Participation

For calendar year 2008, 463 or 81.9% of fire departments reported enough months to be considered participating fire departments. Based on each locality's VFIRS participation and census population, the final overall VFIRS population protected for 2008 was 94.8%.

Incident Types

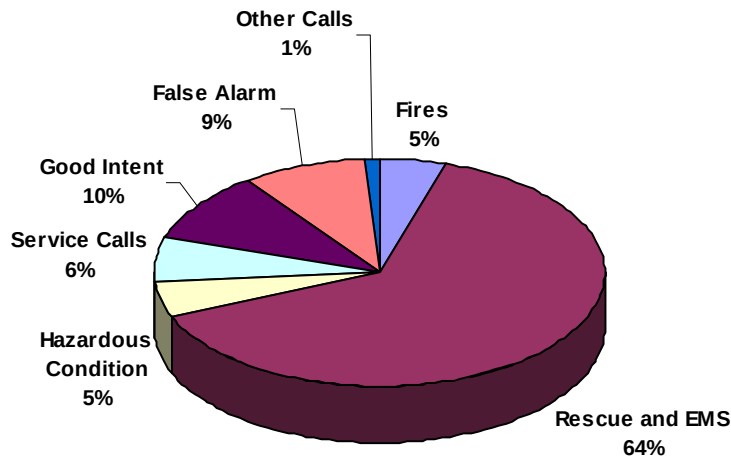

In 2008, fire departments responded to 619,559 incidents in Virginia. These incidents included 29,392 fires, 394,900 rescue/medical incidents, 32,170 hazardous condition calls, 39,997 service calls, 60,366 good intent calls, 54,998 false calls and 7,736 other calls. (See Table 1.) There were 36,956 incidents in which a fire department provided assistance (mutual or automatic aid given) to another jurisdiction. In addition, there were 522 fire incidents that were fire exposures (fires large enough to cause fire damage beyond the property where the fire started).

Table 1. Incident Type Summary, Virginia, 2008

Incident Type	Total	Percent
Fires	29,392	4.7%
Rescue and EMS	394,900	63.7%
Hazardous Condition	32,170	5.2%
Service Calls	39,997	6.5%

Total Incidents	619,559	100.0%
Aid Given (Mutual or Automatic)	36,956	
Fire Exposures	522	
Grand Total	657,037	

Fire incidents accounted for 5 percent (4.7%) of the total incidents responded to by fire departments in Virginia for 2008. (See Figure 1.) Rescue and emergency medical service incidents made up almost two-thirds (63.7%) of the total calls handled by fire departments.

Figure 1. Incident Type Summary, Virginia, 2008

Total Fire Dollar Loss

Property and contents dollar loss is required for all fire incidents and helps to measure the severity of fire loss in Virginia. In 2008, there were 29,392 fires with a total dollar loss reported as \$325 million. (See Table 2.)

Table 2. Fire Dollar Loss Summary, Virginia, 2008

Dollar Loss	Total
Total Property Loss	\$208,961,203
Total Contents Loss	\$116,045,033
Total Dollar Loss	\$325,006,236

Civilian and Fire Service Casualties

In addition, losses also occur when civilian or fire service are injured or killed during an incident. There were 474 civilian injuries and 80 civilian deaths due to fire incidents in 2008. (See Table 3.) Fire Service had 335 injuries with their personnel in 2008 accounting for all types of incidents. There was one fire service death reported in 2008.

Highlights from 2008 VFIRS Incident Reporting

- o There were a total of **619,559** incidents reported by fire departments.
- o The overall VFIRS population protected in 2008 was **92.8%**.
- o **64%** or almost two-thirds of all incident reported were Rescue and EMS calls.
- o Fires only accounted for **5%** of the total incidents.
- o Incidents occurred at a rate of **92.3** incidents for every 1,000 Virginia residents.
- o **\$325 million** dollars of property and contents loss were reported with fire incidents.
- o The average dollar loss per fire incident was **\$12,877**.
- o **\$6.4 billion** dollars of property and contents were saved with fire incidents.
- o There were 433 incidents with a total of **544** civilian fire casualties; Fire service had 279 incidents with **336** casualties.
- o Structure fires accounted for one-third or **33%** of the fire incidents; Brush fires made up **28%** of the total incidents.
- o Aid was given **36,956** times by fire departments to other areas.
- o There were **522** exposure fires that spread from the original source fire.
- o **June** was the month with the most incidents, while **March** was the month with the largest amount of fires.
- o The average response time with fire departments in 2008 was **6.9** minutes.
- o Each fire incident on average had **4.0** pieces of apparatus and **9.6** total personnel.
- o Fire service accumulated **3,010,356** hours responding to incidents.
- o **Cooking** was the cause of 31% of all residential structure fires.
- o **28%** of building fires had a detector that operated and alerted the occupants.

Incident Time Statistics

- Fire departments in Virginia responded to one incident every **51 seconds**.
- One Rescue and EMS call occurred every **80 seconds**.
- One Fire occurred every **17.9 minutes**.
- One Civilian Fire Casualty occurred every **15.8 hours**.
- One Fire Service Casualty occurred every **1.1 days**.
- Total Fire Dollar Loss was reported on average as **\$890,428 per day**, **\$37,101 per hour** and **\$618 per minute**.
- Fire Service in Virginia responded to **1,697** incidents a day.
- Fire departments responded to **45.1** Rescue and EMS calls and **3.4** fires an hour.

Chapter 1

Introduction

Fighting Fires with Facts 2008

This *Fighting Fires with Facts 2008 - VFIRS (Virginia Fire Incident Reporting System) Annual Report* is more than a reporting of fire incident statistics for Virginia fire departments. It brings awareness and provides a scorecard of the impact of fire incident reporting at the three levels of statewide incident reporting: fire department, locality, and state. Most people are vaguely aware of the range of services that fire departments provide. If you ask, most likely “responding to fires” will be the Number 1 response. The fact is fire only represents a small percentage of fire departments responses. In 2008, it was 5% statewide. In *Fighting Fires with Facts 2008*, the full scope of fire departments’ activities is presented.

GETTING CREDIT FOR ALL RESPONSES

“Getting credit for all responses” was a focus in 2008 to ensure that the full scope of fire departments’ activities was reported. To get credit, fire departments needed to document all emergency responses and public service calls. These calls includes building fires, hazardous spills, filling swimming pools, and in-station, walk-in blood pressure checks. Not documenting ALL calls in VFIRS undercount the full range of services that that fire departments provides to their communities. In addition to documenting all calls, for the calls to count, they need to become part of the National Fire Incident Reporting System (NFIRS). In 2008, more than 15.8 million incidents were reported. Virginia fire departments contributed more than 657,000 incidents to the total. In Virginia, 82% of the fire departments participated in NFIRS. The participation represented 95% of population protected. For participating fire departments, the average months of reporting were 11.0 months.

VFIRS is part of the NFIRS and NFIRS is based on the National Fire Protection Association (NFPA) 901 Codes. The codes are an accepted standard used by more than 20,700 fire departments in all fifty of the United States. While most fire departments have some means of tracking responses, NFIRS is the recognized incident based system for reporting incidents.

VFIRS AUDITS

Efforts were made during the year to ensure that the data was accurate and complete. Three audits were performed. The audit included (1) getting fire departments to correct invalid incidents. These incidents contained critical errors and must be corrected for them to become part of national statistics; (2) verification of all incidents with a response time one hour or more or an incident duration one day or more; (3) verification of all fire

dollar loss \$500,000 or more; (4) verification of all building fires and vehicle fires with no fire dollar loss or zero dollar loss; (5) verification of incidents with undetermined or unresolved area of fire origin, heat source, item first ignited, and cause of ignition; (6) missing reporting months; and (7) fires in buildings with more than 6 stories above grade and 2 stores below grade. The fire department response to the audit was good. It resulted in improved accuracy and completeness of the 2008 data. The audits were successful enough for other states to adopt the format.

A VALID INCIDENT VERSUS A COMPLETE INCIDENT

It is equally important to help fire departments to move beyond ensuring that an incident is valid and move towards striving for a complete incident. A valid incident passes the NFIRS validations and contains no critical errors. The fire department gets credit for the incident and it can be released for use in national statistics. A valid incident might not give a complete account of the facts known. It might not include information on the required modules such as property/content value, district, person involved, and owner. It might not include some of the optional NFIRS modules that give expanded details. It might not include updates to information obtained after the initial incident was reported. A complete incident contains a full account of all information known during the complete life cycle of the incident. For fire departments to get credit for all that they do and for the users of the data to understand the roles of the fire services, fire departments' incidents need to be complete.

THE TEAM

The Department of Fire Programs' 2008 team responsible for VFIRS statewide reporting consists of:

Marion A. Long, Information & Statistics Manager
NFIRS State Program Manager

Dwight E. Crews, Fire Research Analyst

Renee Tabb, Program Support Technician

CONCLUSION

As we close out 2008 with this report, we have already set our goal to improve on the accuracy, completeness, and timeliness of VFIRS 2009 data and information. To reach our goal, your comments are welcome. "Fighting Fires with Facts" is more than a phrase. It is our mission to show how fire data is an invaluable tool in today's decision-making circles. If you have questions or comments about "Fighting Fires with Facts" or VFIRS, please send them to:

Fire incidents accounted for 5 percent (4.7%) of the total incidents responded to by fire departments in Virginia for 2008. (See Figure 2.) Rescue and emergency medical service incidents made up almost two-thirds (63.7%) of the total calls handled by fire departments.

The makeup of the types of calls that fire departments handled in 2008 remained fairly consistent with the types of calls reported for previous years. (See Table 5.) Fires showed a decrease from 2007 to 2008, while Rescue and EMS calls showed an increase. The VFIRS population protected for 2008 was 94.8% and the number of incidents increased by 13,710.

Figure 3. Virginia / National Incident Types Comparison, 2008

Note: Data was compiled by the National NFIRS Program from incident data reported as of 04/11/2009.

For 2008, Virginia had a lower percentage of fire incidents (6%) compared to the national numbers. (See Figure 3.) Sixty-two percent (62%) of incidents in Virginia were EMS calls, while nationwide, 58% of all calls were EMS.

Incident Rates

Overall, in Virginia, there were 92.3 incidents for every 1,000 residents in 2008. (See Table 7.) Fires occurred at a rate of 4.4 per 1,000 residents, while Rescue and EMS calls accounted for a rate of 58.8. The incident rate with Fires showed a decrease from 5.1 to 4.4 in 2008, while the Rescue and EMS incident rate showed an increase from 56.7 in 2007 to 58.8 in 2008. (See Figure 4.)

Table 7. Incident Rates By Incident Type, Virginia, 2008

Note: Incident Rate calculation is based on the 2000 U.S. Census Population for Virginia (7,078,515) and the 2008 VFIRS population protected rate of 94.8%.

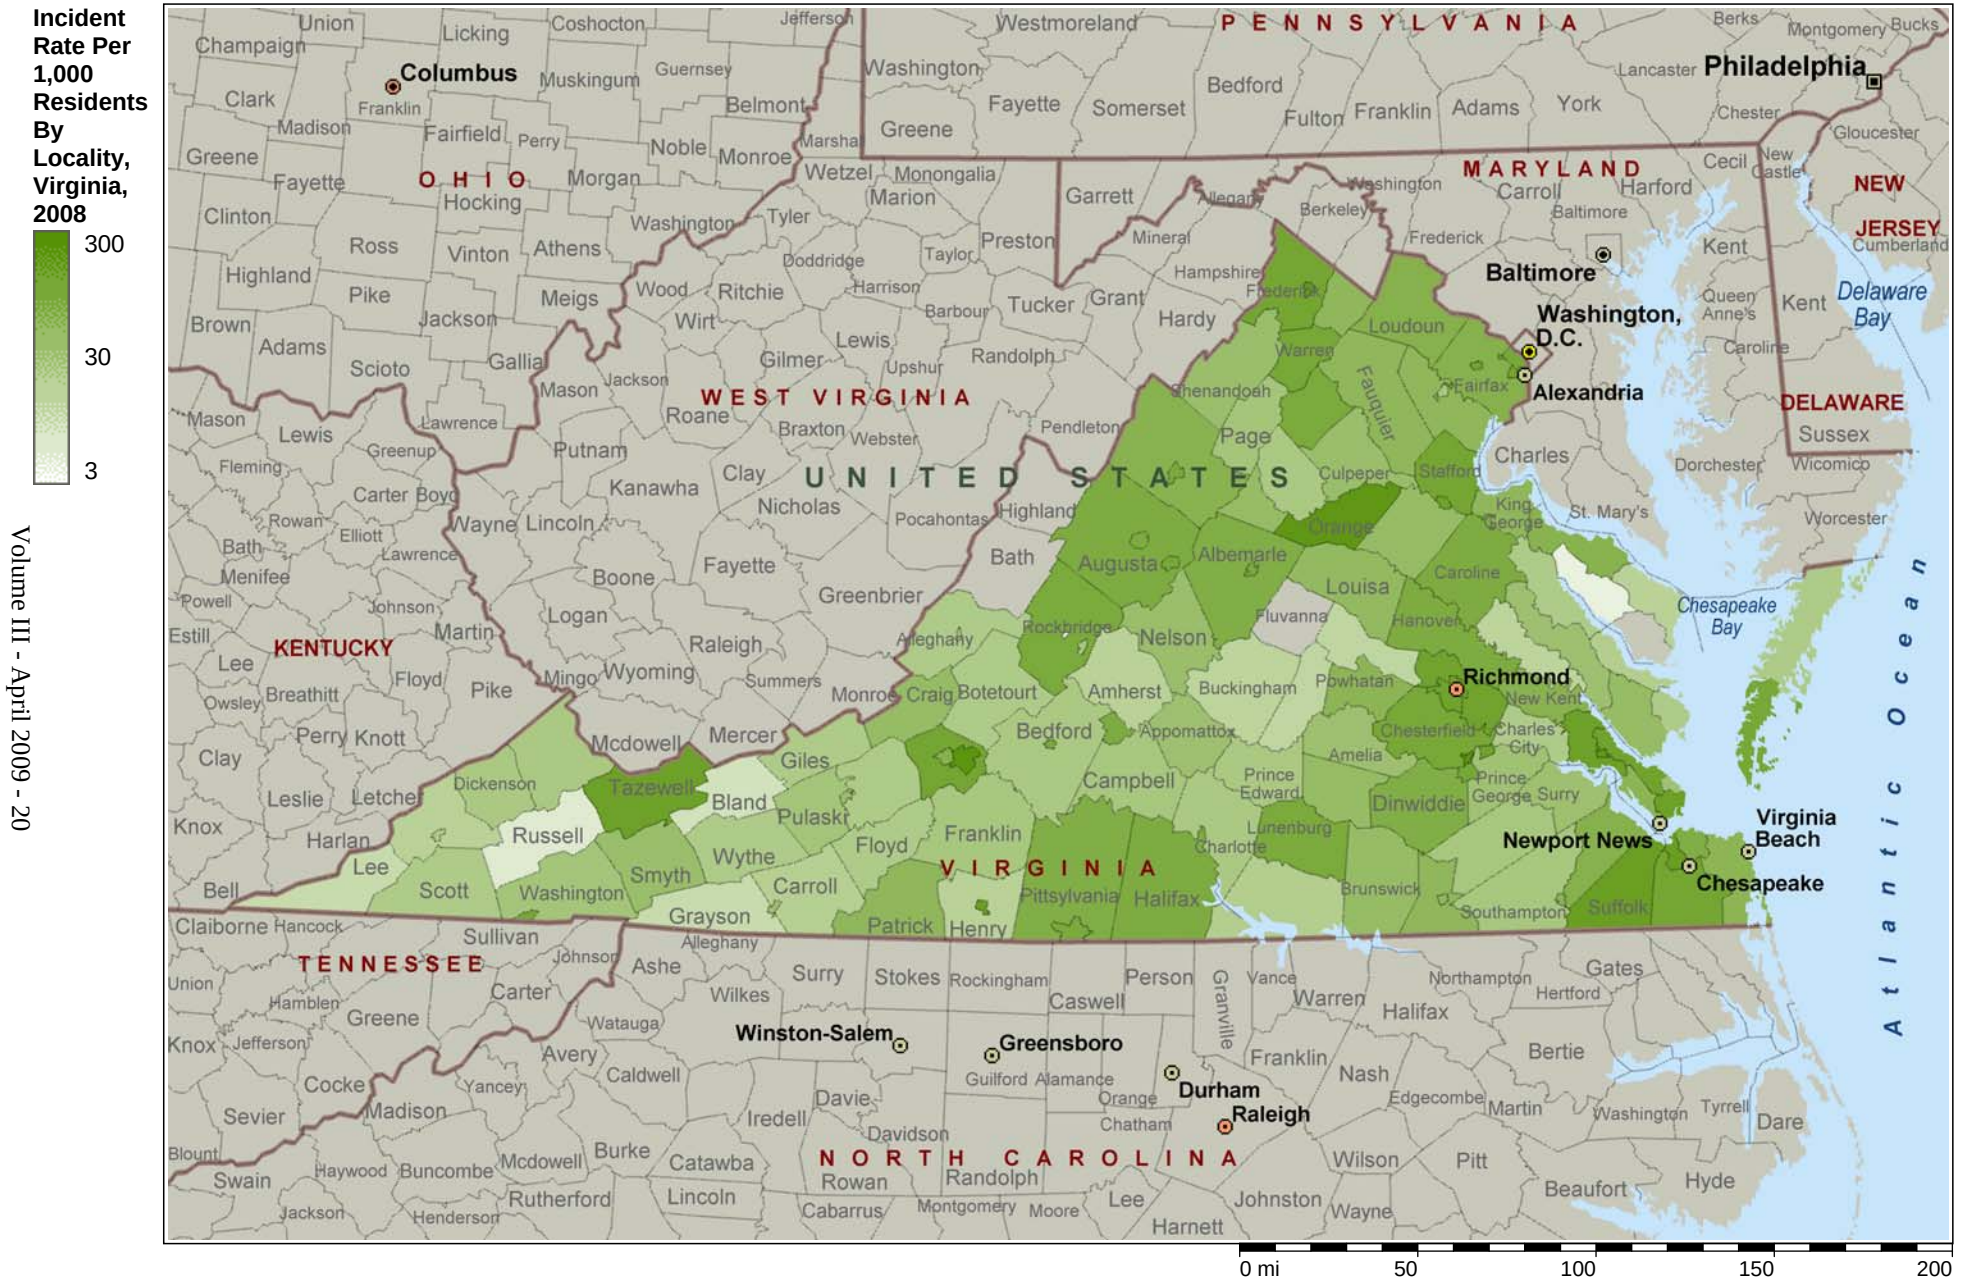

The total incident rate per 1,000 Virginia residents has increased since 2004 from 77.8 to 92.3. The fire incident rate has remained closely the same over the years and had an incident rate of 4.4 per 1,000 residents in 2008. (See Table 8. and Figure 5.)

Total Fire Dollar Loss

The estimated property and contents dollar loss is required for all fire incidents and help determine the magnitude of the loss of each incident. The total dollar loss reported with all fire incidents for 2008 was \$325,006,236. (See Table 10.) Structure fires accounted for the largest average (mean) dollar loss with \$30,868 per incident.

Casualties

Casualties are unfortunate losses that result from incidents and have a great impact on the public resulting in personal loss to families. Fire service equally suffers the loss and additionally results in a reduction of staff providing services. In 2008, there were a total of 554 civilian fire casualties (474 injuries and 80 deaths) caused by fire incidents. (See Table 13.) Fire service casualties with all types of incidents totaled 336 casualties and had 335 injuries and 1 death. (See Table 14.)

Fire Incidents

Fire departments reported in 2008 that they responded to 29,392 fire incidents during the year. (See Table 15.) Structure fires (33.6%) made up the largest incident category with fire incidents, while natural vegetation fires accounted for 29 percent. (See Figure 8.) Mobile property vehicle fires accounted for 16% of the total fires in 2008.

Aid Given or Received

Fire departments can give/receive aid to/from other fire departments in their area for incident calls that require additional resources. The aid given can be either mutual (fire departments request need for assistance) or automatic (pre-arranged agreement to aid).

Ninety percent (90.2%) of the incidents responded to by fire service in Virginia were incidents that did not involve mutual or automatic aid given or received. (See Figure 10.) The departments did not receive any aid from other fire departments or did not give aid to other fire departments. Fire departments in Virginia gave mutual / automatic aid with 6% of the total incidents.

Fire Exposures

Fire exposures are fire incidents that result from fires that have spread outside their area of origin to other properties. Source fires are the original fire that started at the incident scene. The fire exposures are the fires that have spread to other areas.

In 2008, there were 515 source fires that spread 522 exposure fires. (See Table 17.) Fire exposures have a higher injury rate and death rate per 1,000 fires when compared to the rate with all fires. The average fire dollar loss with source and exposure fires was \$68,834, while the average (mean) dollar loss with all fires was \$12,876.

Date/Time of Incident

Fires occurred most frequently in the month of March (3,556 incidents), but in Virginia, June was the month with the most total incidents overall. (See Table 18.) Sunday was the day of the week with the most fires, accounting for 4,597 incidents. (See Table 19.) In addition, Sunday overall had the least amount of calls for 2008 when accounting for all incidents.

Incidents occurred the least during the 4:00 a.m. hour of the day in Virginia. (See Table 20. and Figure 13.) Incidents occurred most frequently during the 3:00 p.m. hour of the day.

Response Time

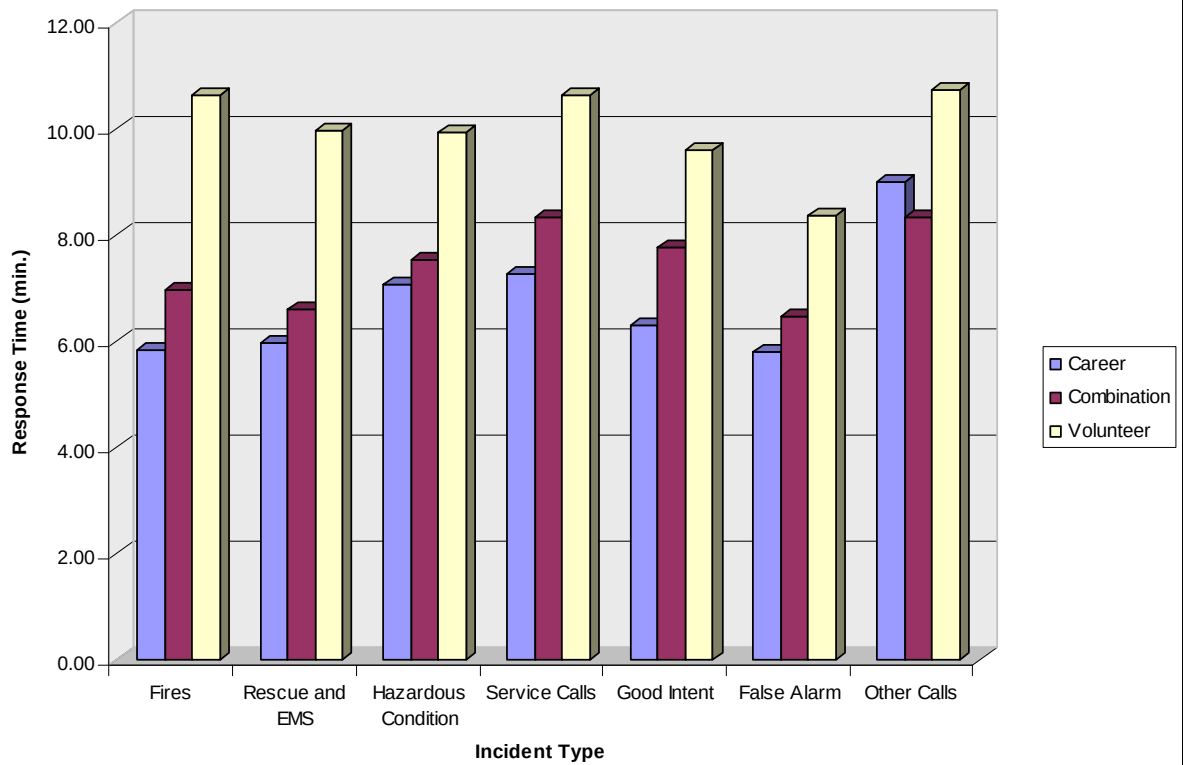

Fire department response time captures how timely response is provided to different types of situations in an area. Response time is the difference between the fire department arrival date/time and the fire department alarm date/time. The average response time for all fire departments in 2008 was 6.87 minutes. (See Table 21.) Career fire departments had an overall average response time of 6.12 minutes, while volunteer departments responded in 9.95 minutes.

Actions Taken

Fire department personnel have to perform multiple duties at an incident scene. Fifty-four percent (54.4%) of all actions taken at an incident involved EMS and Transport duties. (See Table 22.) Activities concerning Information, Investigation, and Enforcement accounted for 19% of the actions taken.

Resources

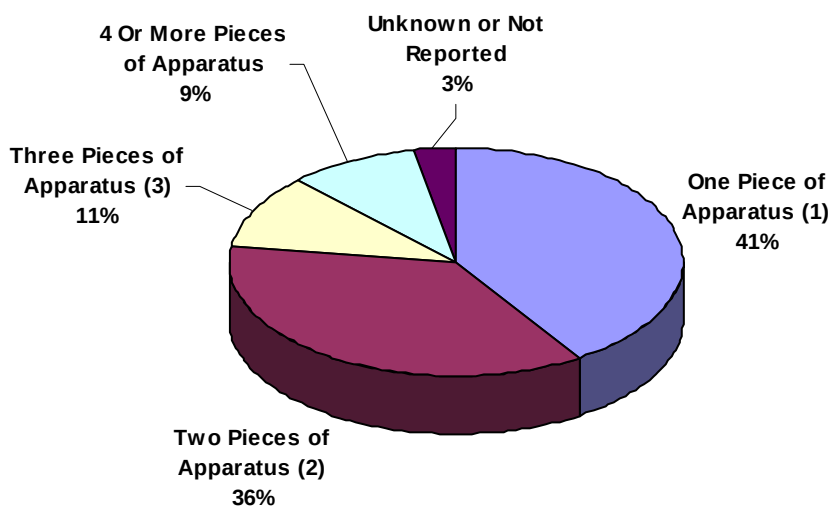

Fire service resources that respond to an incident consist of apparatus and personnel and can be classified as suppression, EMS, or other. The average number of apparatus that responded to an incident was 2.1. (See Table 24.) Fires required the largest number of apparatus for an incident and accounted for an average (mean) of 4.0 total apparatus per incident.

Forty-one percent (41%) of all reported incidents in 2008 required only one piece of apparatus to respond to the incident. Two pieces of apparatus were needed with 36% of the total incidents. (See Figure 16.)

Fire incidents required the largest amount of personnel for an incident with an average of 9.6 total personnel per incident. Forty-five percent (45%) of all incidents needed 1 to 4 fire service personnel to respond to the emergency. (See Figure 17.)

Total Hours Committed

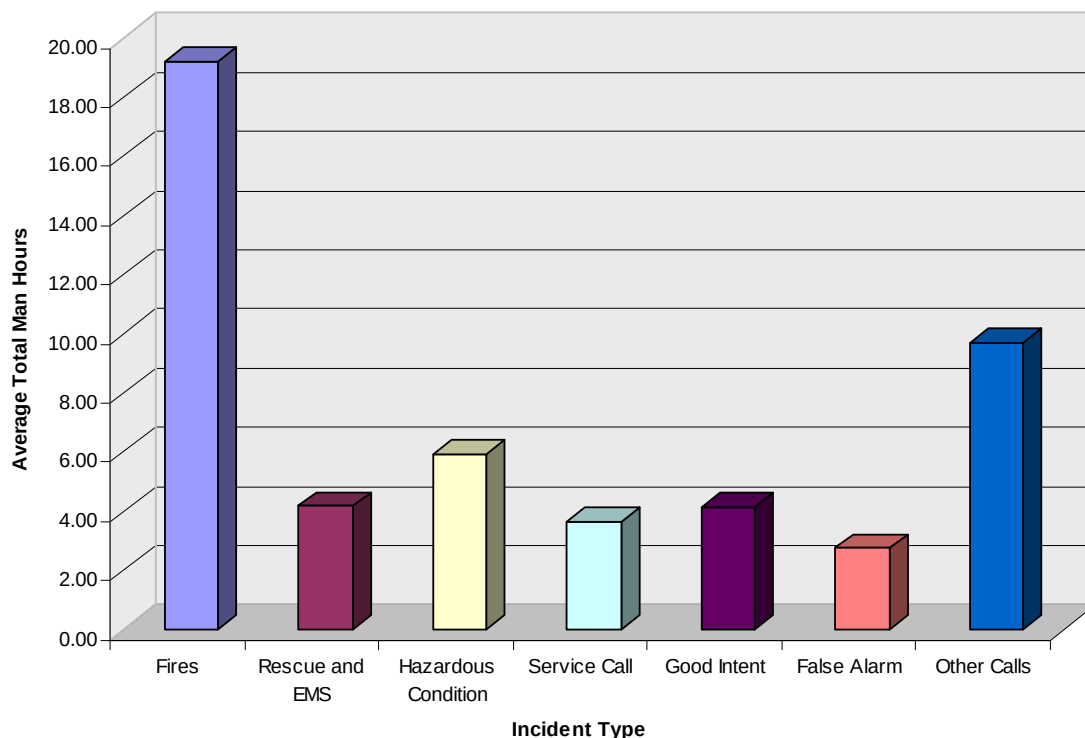

The total hours committed represents the total amount of time needed to handle and control an incident. Total hours committed for an incident is calculated by multiplying the total number of personnel by the duration time of the incident (Difference between the last unit cleared date/time and the alarm date/time).

Fire service in Virginia accumulated a total of 3,010,356 hours responding to incidents in 2008. (See Table 26.) Fire incidents had the largest average total hours committed in 2008 with 19.19 hours. (See Figure 18.)

Property Use

Fire service incidents occurred at many different types of establishments and locations in Virginia in 2008. Each location of an incident had a specific property use. Fifty-one percent (50.9%) of incidents that fire service responded to occurred with residential property use establishments. (See Table 27.) Twenty-one percent (20.5%) of incidents occurred at a location outside or with special property use.

Residential Structure Fire Causes

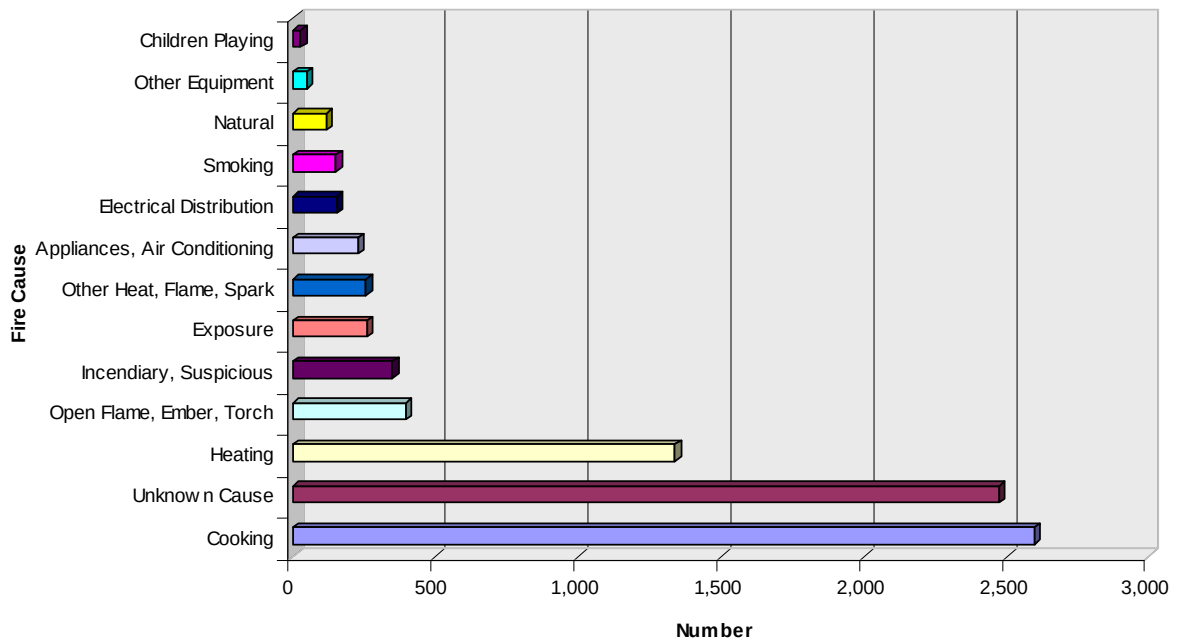

Cooking was the leading known fire cause with Residential Structure Fires accounting for 31 percent. (See Table 30. and Figure 21.) Heating made up 16% of the residential structure fire causes. Fires that were incendiary or suspicious accounted for 4% of the total fire causes.

Building Fires

Area of Fire Origin

Area of Fire Origin describes the location where the fire started. The Top Area of Fire Origin with Building Fire Incidents in Virginia was Cooking areas, kitchens. (See Figure 22.)

The largest amount of building fire incidents (2,242) had an area of fire origin in the function areas category. (See Figure 23.) Function areas include bedrooms, kitchens, bathrooms and laundry areas.

Cooking areas, kitchens were the top area of fire origin with building fire incidents with the Assembly (27.9%) and Residential (23.0%) Property Use Series categories. (See Table 31.) Bedrooms for less than five people was the area of fire origin with the largest amount of building fire incidents in the Health Care, Detention, and Correction and Mercantile, Business Property Use Series category.

Heat Source

The Heat Source of a fire can be described as what ignited to cause the fire. The Top Heat Source with Building Fires was Undetermined. (See Figure 24.) Radiated, conducted heat from operating equipment was the #2 Top Heat Source with Building Fires in Virginia.

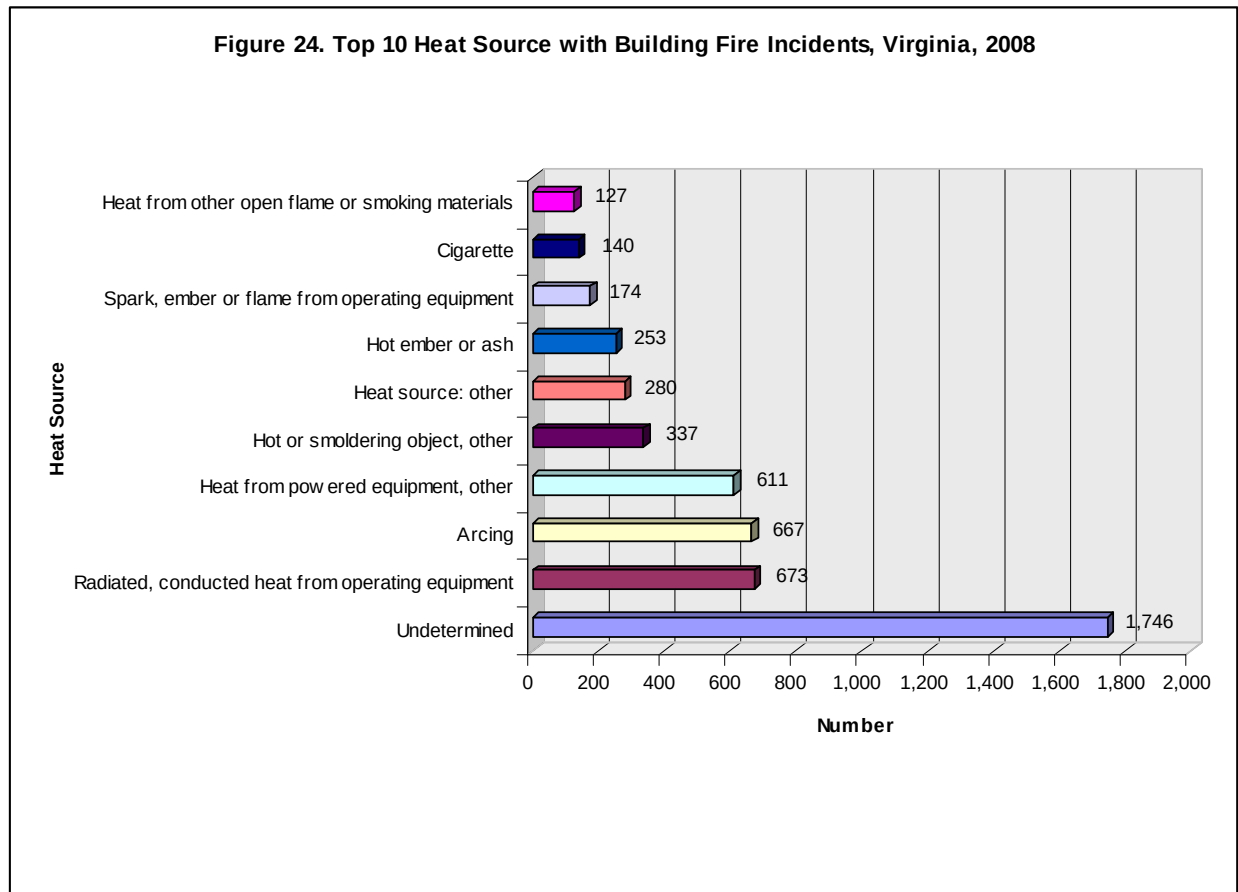

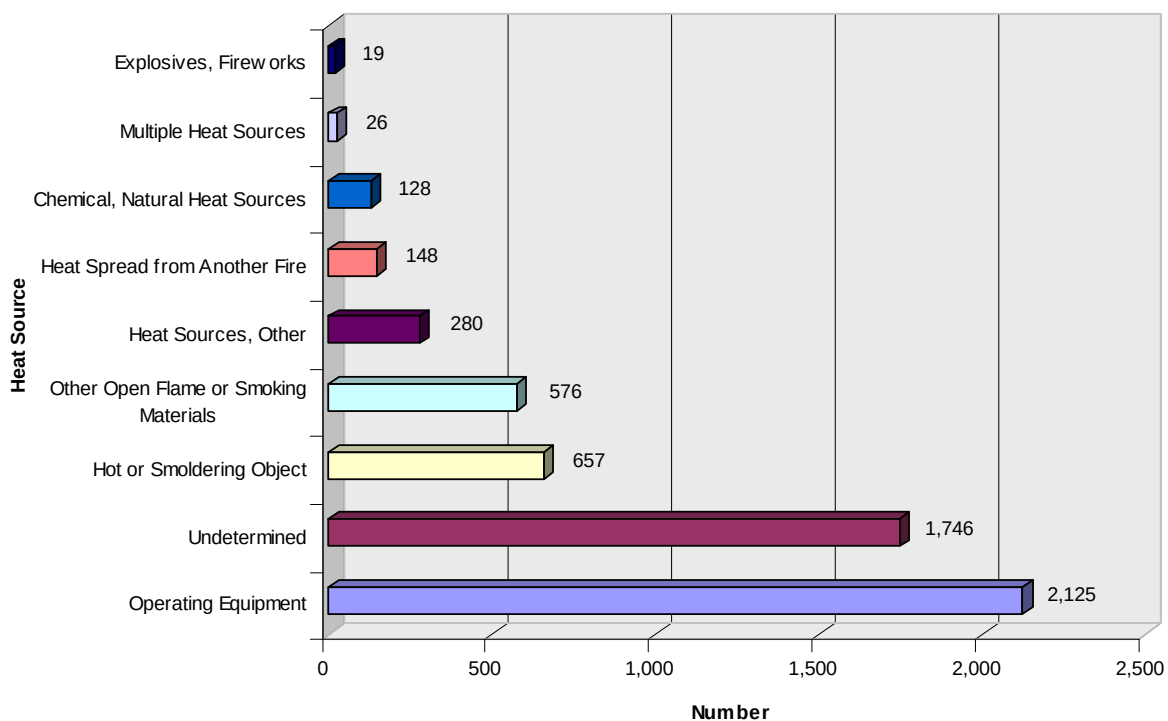

Figure 25. Heat Source Category with Building Fire Incidents, Virginia, 2008

Item First Ignited

Item First Ignited is the item or material that first ignited by the heat source producing an uncontrollable fire. The largest amount of building fire incidents (1,702) had an Undetermined Item First Ignited. (See Figure 26.) Cooking materials, including edible materials was the Item First Ignited that occurred with the second highest frequency.

Structural components finish which includes exterior and interior building parts occurred with 1,066 building fires in 2008. (See Figure 27.) The Top Item First Ignited with the Health Care, Detention and Correction Property Use Series was electrical wire, cable insulation. (See Table 34.)

Cause of Ignition

The cause of ignition of a fire documents if the fire was intentional or unintentional, result of a mechanical failure or caused by an act of nature. Forty-six percent (46%) of building fire incidents were unintentional. (See Figure 28.) Six percent (6%) of building fires were classified as intentional.

Equipment Involved in Ignition

The Equipment Involved in Ignition describes the equipment that malfunctioned or that was used improperly that provided the source for ignition. Ranges with or without oven, cooking surfaces was the Equipment Involved in Ignition with 10% of the Building Fire Incidents. (See Table 35.)

Building Height

Building Fires occurred with buildings that were one story the most (53.0%), while two-story buildings made up 34% of the building fires. (See Table 36.)

Fire Spread

Building Fires in which the Fire Spread was Confined to the Building of Origin, but spread from the object, room and floor, accounted for the highest Total Fire Dollar Loss. Building Fires that were confined to the room of origin had the highest number of civilian casualties. (See Table 38.)

Detector Use

Twenty-eight percent (27.8%) of building fires had a detector that operated & alerted the occupants. (See Table 39. and Figure 29.) Thirty-five (35.0%) of the building fires that were reported had an unknown or undetermined detector use.

Civilian Fire Casualties

Civilian fire casualties consist of non-fire service personnel who have been injured or have died during a fire incident. Civilian fire casualties occurred with different type of fire incidents and 73% occurred with Building Fires (excluding confined building fires). (See Table 41.)

Table 41. Civilian Fire Casualty Data By Incident Type, Virginia, 2008

February was the month with the highest amount of civilian fires casualties accounting for 70 injuries or deaths. (See Figure 30.)

Seventeen percent (17%) of incidents with civilian fire casualties had more than one casualty that occurred during the incident. (See Figure 31.)

Figure 31. Number of Casualties with Civilian Fire Casualty Incidents, Virginia, 2008

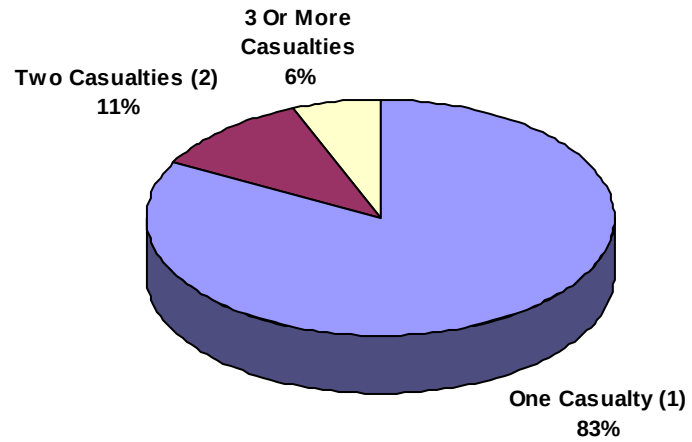

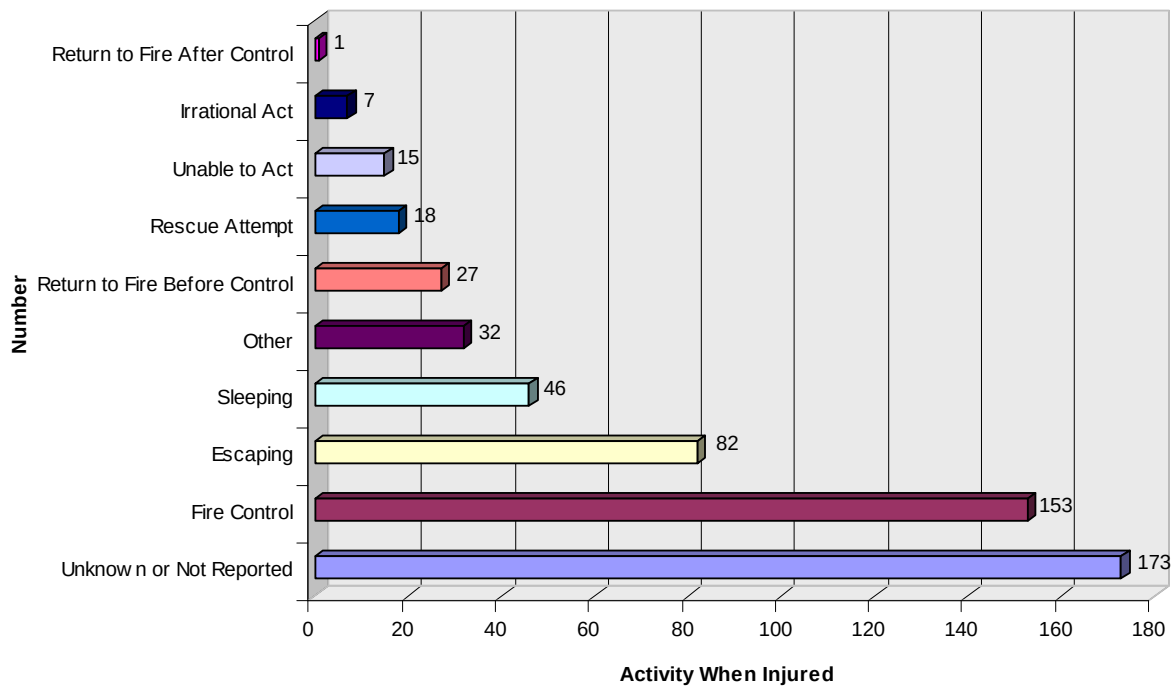

Figure 32. Civilian Fire Casualties By Activity When Injured, Virginia, 2008

Fire Control was the Activity When Injured that accounted for 153 of the civilian fire casualties. (See Figure 32.)

Fire Service Casualties

Fire service casualties are injuries or deaths that occur with fire service personnel while performing duties during any type of incident or situation. Sixty percent (59.5%) of fire service casualties occurred with fire incidents. (See Table 42.) June was the month with the highest amount of fire service casualties accounting for 41 injuries or deaths. (See Figure 33.)

Note: Incidents with 'blank' property use are not included in the table, therefore, the total number of incidents may not match other tables.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009.

Unless otherwise noted, for all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with all casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers.

Building Fires include incidents with incident type 110-112, or 120-123. Data from the Structure Fire Module from Sections J-M is tabulated with incident types coded as 110, 111, or 120-123 and structure type coded as 1 or 2.

Percentages may not add to totals due to rounding.

The source for the different Virginia Regions was the Regional Community Map found at the Virginia State Government website, <http://www.virginia.gov/cmsportal2/>.

The Central Region includes the Counties of Albemarle, Amelia, Amherst, Appomattox, Bedford, Brunswick, Buckingham, Campbell, Charlotte, Chesterfield, Cumberland, Dinwiddie, Fluvanna, Greene, Greensville, Halifax, Hanover, Henrico, Henry, Louisa, Lunenburg, Madison, Mecklenburg, Nelson, Nottoway, Orange, Pittsylvania, Powhatan, Prince Edward, Prince George, Southampton, and Sussex; and the Cities of Bedford, Charlottesville, Colonial Heights, Danville, Emporia, Franklin, Hopewell, Lynchburg, Martinsville, Petersburg, and Richmond.

The Coastal Region includes the Counties of Accomack, Charles City, Essex, Gloucester, Isle of Wight, James City, King and Queen, King George, King William, Lancaster, Mathews, Middlesex, New Kent, Northampton, Northumberland, Richmond, Surry, Westmoreland and York; and the Cities of Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg.

The Mountain Region includes the Counties of Bland, Buchanan, Carroll, Dickenson, Floyd, Franklin, Giles, Grayson, Lee, Montgomery, Patrick, Pulaski, Russell, Scott, Smyth, Tazewell, Washington, Wise and Wythe; and the Cities of Bristol, Galax, Norton, and Radford.

The Northern Region includes the Counties of Arlington, Caroline, Culpeper, Fairfax, Fauquier, Loudoun, Prince William, Rappahannock, Spotsylvania and Stafford; and the Cities of Alexandria, Fairfax, Falls Church, Fredericksburg, Manassas, and Manassas Park.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009. For all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with all casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers.

* Greenville County does not currently have fire service in their locality. Emergency response for their area is handled by Emporia Fire Dept. (FDID 59500) and Jarrett Vol. Fire Dept. (FDID 18301).

** The City of Falls Church currently participates in VFIRS, but due to contractual arrangements with Arlington County (FIPS 013), their statistical information cannot be tabulated and, therefore, is combined with the incidents from Arlington County.

Note: Localities in CAPS designate localities with 100% VFIRS Participation.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009. For all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with a casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers.

* Greenville County does not currently have fire service in their locality. Emergency response for their area is handled by Emporia Fire Dept. (FDID 59500) and Jarrett Vol. Fire Dept. (FDID 18301).

** The City of Falls Church currently participates in VFIRS, but due to contractual arrangements with Arlington County (FIPS 013), their statistical information cannot be tabulated and, therefore, is combined with the incidents from Arlington County.

Note: Localities in CAPS designate localities with 100% VFIRS Participation.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009. For all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with all casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers.

* Greenville County does not currently have fire service in their locality. Emergency response for their area is handled by Emporia Fire Dept. (FDID 59500) and Jarrett Vol. Fire Dept. (FDID 18301).

** The City of Falls Church currently participates in VFIRS, but due to contractual arrangements with Arlington County (FIPS 013), their statistical information cannot be tabulated and, therefore, is combined with the incidents from Arlington County.

Note: Localities in CAPS designate localities with 100% VFIRS Participation.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009. For all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with all casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers. The total number of fire departments may not match other tables due to different groupings of departments by locality. Fire departments shown above with dashes (-) did not report any incidents to VFIRS.

Note: Greensville County does not currently have fire service in their locality. Emergency response for their area is handled by Emporia Fire Dept. (FDID 59500) and Jarrett Vol. Fire Dept. (FDID 18301).

* Fire departments are required to report at least 3 months of incidents to be designated as a participating VFIRS fire department.

** Falls Church Vol. Fire Dept. (FDID 61000) currently participates in VFIRS, but due to contractual arrangements with Arlington Co. Fire Dept. (FDID 01300), their statistical information cannot be tabulated and, therefore, is combined with the incidents from Arlington County.

Note: Fire departments in CAPS designate departments with 12 months of reported incidents.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009. For all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with all casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers. The total number of fire departments may not match other tables due to different groupings of departments by locality.

Note: Greensville County does not currently have fire service in their locality. Emergency response for their area is handled by Emporia Fire Dept. (FDID 59500) and Jarrett Vol. Fire Dept. (FDID 18301).

* Falls Church Vol. Fire Dept. (FDID 61000) currently participates in VFIRS, but due to contractual arrangements with Arlington Co. Fire Dept. (FDID 01300), their statistical information cannot be tabulated and, therefore, is combined with the incidents from Arlington County.

Note: Fire departments in CAPS designate departments with 12 months of reported incidents.

Note: Data is compiled from information reported to the Virginia Fire Incident Reporting System (VFIRS) for 2008 as of 04/06/2009. For all frequency or incident counts, mutual/automatic aid given and fire exposure incidents were excluded from the numbers. For casualty statistical information, mutual/automatic aid given incidents were included for all fire service and excluded for all civilian data, and, in addition, fire exposure incidents were included with all casualty numbers. For dollar loss amounts, mutual/automatic aid given incidents were excluded and exposure incidents were included with the numbers. The total number of fire departments may not match other tables due to different groupings of departments by locality.

Note: Greensville County does not currently have fire service in their locality. Emergency response for their area is handled by Emporia Fire Dept. (FDID 59500) and Jarrett Vol. Fire Dept. (FDID 18301).

* Falls Church Vol. Fire Dept. (FDID 61000) currently participates in VFIRS, but due to contractual arrangements with Arlington Co. Fire Dept. (FDID 01300), their statistical information cannot be tabulated and, therefore, is combined with the incidents from Arlington County.

Note: Fire departments in CAPS designate departments with 12 months of reported incidents.
